

TOP OF POLE SKU NAMING

Top of Pole Mount – SKU Breakdown

Notes:

1. NPS and pipe thickness should be selected on our website calculator based on the conditions at the installation site. Schedule 40 and Schedule 80 thicknesses are most common.
2. Layouts that are 4 high in landscape are considered standard and no notation is required in the name. Layouts that are 5 high in landscape are noted with a "TALL" in the name. Multipole configurations of 3 high in landscape are available as custom builds.
3. Frame duty should be selected on our website calculator based on the conditions at the install site.
4. CUS: custom sizing can be applied to the mounting pipe, solar module, module layout, or frame duty to fit project needs.
