

PRODUCT NAMING GUIDE

GROUND MOUNT

Notes:

1. Mounting post size should be selected based on the conditions at the install. Please reach out to our engineering department for assistance on sizing. Span charts are currently under development.
2. Post spacing refers to the distance between posts, which is based on the conditions at the install site.
3. Post Length is the total length of post provided. Posts are provided in two sections that are spliced together. The length is dependent on foundation requirements and the front edge clearance distance. The option of No-Posts is available for customers looking to source their own posts locally.
4. 4- CUS: custom sizing can be applied to the mounting post, solar module, or frame duty to fit project needs.
