

POLE MOUNTS

MAXIMUM VALUE, EASY INSTALLATION

The high-clearance, tilt-adjustable, USA-made solution for maximizing solar investments.

HIGH GROUND CLEARANCE

Top-of-pole solar mounts keep the ground beneath accessible and usable. Raising the arrays makes them more productive and better protected.

RELIABILITY AND RESILIENCE

A simplified structure and robust design make solar racking easier to install and reliable to use, even in remote, rugged, and challenging sites.

SIMPLE TO DESIGN, EASY TO SCALE

More module compatibility for expansive design possibilities, all backed by real-time engineering, so it's easy to configure mounts and plan projects.

ADJUST AND OPTIMIZE

A broader range of tilt angle adjustability lets you optimize output year-round and boost returns, while keeping maintenance within reach.

RaiseYourArrays

DUAL USE OF LAND

Raise array heights to make groundskeeping easier or design mounts as shade structures for storage, patios, driveways, parking lots.

TILT ADJUSTABILITY

Change array tilt angles across 5 to 90 degrees for maximum seasonal output and easy maintenance.

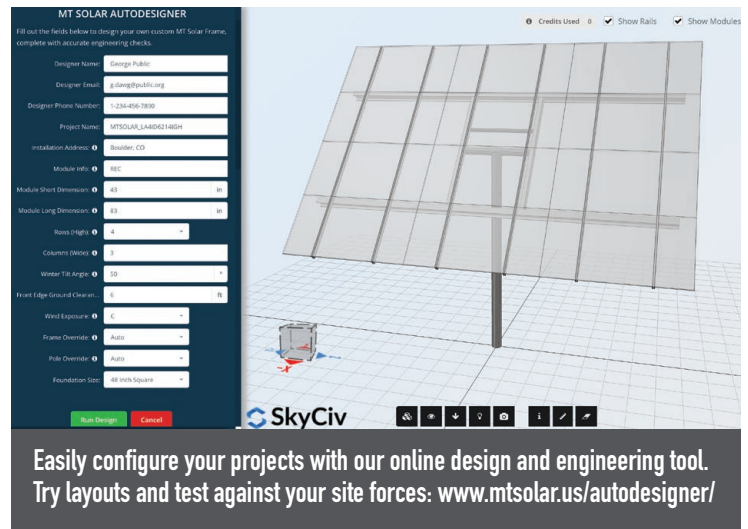

DEPENDABILITY

Standard to extra heavy-duty designs, specifically engineered to peak wind and snow loads for the location.

EFFICIENT PLANNING / PERMITTING

Fast quotes and design outputs are ready for professional engineering stamps and material estimates. PE stamps available for all 50 states.

Tilt / Adjust	5° - 90°
Module Sizes	any, design based on module size
Module Orientation	Landscape
Array Layout	3, 4 or 5 high in rows
Array Size	1 pole to 5 poles
Steel Pole Sizes	NPS 6 in., 8 in., 10 in.
Foundation	Concrete embedded or driven post

Easily configure your projects with our online design and engineering tool. Try layouts and test against your site forces: www.mtsolar.us/autodesigner/

REDUCE YOUR INSTALLATION TIME & COSTS

- Assemble at Waist Level
- Wire On The Ground
- Hoist Without Heavy Equipment
- Fast and Safe for Small Teams

YOUR PARTNER IN SOLAR INSTALLATIONS

Our team proudly designs, builds, and ships mounts from Charlo, MT. We use high-integrity materials and a high-integrity approach to support solar installers through mount design, project planning, installation, maintenance, and everything in between. We're here to be a partner in your success by helping you get more jobs done quickly, safely, and with the best results.

Contact our team to discuss your pole mount project:
